

# Globigen®

# IC

## Intestinal care solution

**Feed supplement for gut support**

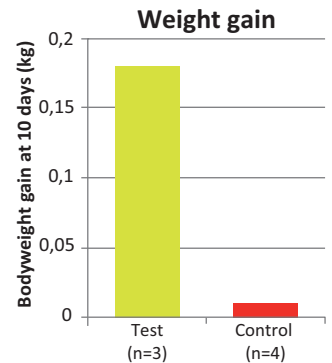

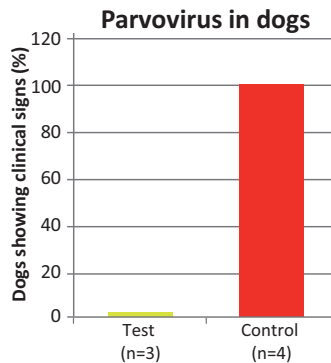

- with high value egg immunoglobulins
- scientifically tested
- easy application in complete feeds and supplements

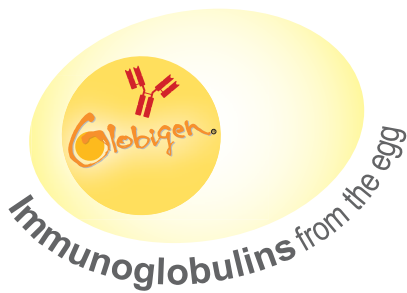

# Globigen®

# IC

Young and sensitive cats and dogs have difficulties to cope with pathogens because of their weak immune system. Beside salmonella and clostridia especially parvovirus often causes serious illnesses with the clinical symptoms of vomiting, diarrhoea and weight loss. A support of the immune system by providing antibodies can help the animal overcome critical phases of life.

The trial shows the good response of the dogs fed an egg powder containing a high level of specific antibodies against diarrhoea causing pathogens after challenge with Canine Parvovirus-2

### Whole egg powder is a rich source of natural immunoglobulins.

Natural antibodies from egg powder strengthen a puppy's immature gastrointestinal system. They stimulate its development and balance and stabilise the intestinal flora. Also, senior, weak, ill or stressed animals (e.g. change of feed or owner) can benefit from additional support with antibodies from egg yolk.

### Dosage recommendation Globigen® IC:

Milk replacer	8.0 – 10.0 kg/t
Dry food diet	3.0 – 4.0 kg/t
Direct application	1 – 5 g / animal/day

**Composition**  
Dextrose  
Whole egg powder

**Commercial packaging:**  
20 kg bag
